

indoor air quality and energy saving

TECHNICAL DATA

FAI-EC H/V

VENTILATION UNIT WITH HEAT RECOVERY FOR COMMERCIAL AND INDUSTRIAL BUILDINGS

FAI-EC

Is a Non Residential Ventilation Unit (NRVU)

EQUIPPED

Equipped with medium efficiency counterflow heat exchanger (Eurovent certified) and EC fans.

STRUCTURE

The FAI-EC is made of extruded aluminium profiles and double skin Aluzinc[®] panels, sandwiched on injected polyurethane foam insulation, thickness 25 mm and density 42 Kg/m³. The position of the ducting connections, made with circular spigots, are easily configurable simply by moving the ducting connection panels. Five sizes are available in horizontal configuration, ceiling installation (only for size 1 and 2) and floor installation, or vertical configuration (floor installation), all equipped with automatic total bypass and medium efficiency heat exchanger.

Post heating devices (electric or water) and electrical pre heater device are integrated into the unit, post cooling/heating water coil and direct expansion coil, are available as additional external module. The filtering sections are: ePM1 70% (F7) filters for the fresh air flow and ePM10 50% (M5) filters for the extraction air flow.

CONTROLS

The FAI-EC is supplied with control system and easy connection to the power supply. It's also available the versions with simplified CTR08-PH control, the version with EVO-PH control and the version with EVOD-PH-IP control ready for integration in home automation systems (Modbus protocol with Ethernet connection or, upon request, with the addition of the RS485 connection). The new version of our control systems allows the user to shift from one control system to another very quickly and easily by replacing the remote panel even after the installation.

The CTR08-PH control allows the user to select three levels of fan speed or the possibility to stop them. It automatically manages the By-pass and prevents the heat exchanger freezing by programming the fan speed or, if specifically required, the electric pre-heater resistance (optional item to install inside the unit).

.The control advises the user if filters needs to be replaced (the filter clogging is monitored by a pair of differential pressure sensors) or any other fault.

The EVO-PH control has a colored backlit touch screen interface, it gives an intuitive operating status of the unit and it allows programming the fan speed. This control has a weekly time schedule for automatic unit control, it can be controlled by an external switch to activate the booster and it can automatically adjust the air flow when connected to an air quality sensor. It supports post-air treatment accessories and it advises the user if filters needs to be replaced (the filter clogging is monitored by a pair of differential pressure sensors) or if there is any other fault showing where it comes from.

The EVOD-PH-IP control has the same characteristics of the EVO-PH version with the addition of the Modbus communication protocol and it allows full control of the unit by the Home Automation software system. If the unit is in a Home Automation network, the webserver lets the user interact with it throughout a device connected to an Internet browser.

On request it's also available the version without control system and without electrical cabinet (adjustable pressure switches for filter status and bypass actuator are installed)

ACCESSORIES

- FAI-EC can be equipped with other accessories such as:
 - . R.H. of probe, CO₂ or CO₂ / VOC
 - . protection roof for outside instalazione
 - . switch speed

For a more complete view of the characteristics of the control panels, please read the specific manuals.

FAI-EC H (horizontal) - TOP VIEW

FAI-EC V (vertical) - SIDE VIEW

Counterflow heat exchanger made of aluminum manufactured by RECUTECH
RECUTECH participates in the Eurovent Certification Program

PERFORMANCE (UNI EN 13141-7)

The unit must be ducted properly: UTEK authorizes the use only according to its performance diagram shown into this catalogue
The declared performances are with CLEAN filters, and guaranteed ONLY with the original filters UTEK low pressure drop.

FAI-EC 1

FAI-EC 2

PERFORMANCE (UNI EN 13141-7)

The unit must be ducted properly: UTEK authorizes the use only according to its performance diagram shown into this catalogue
The declared performances are with CLEAN filters, and guaranteed ONLY with the original filters UTEK low pressure drop.

FAI-EC 3

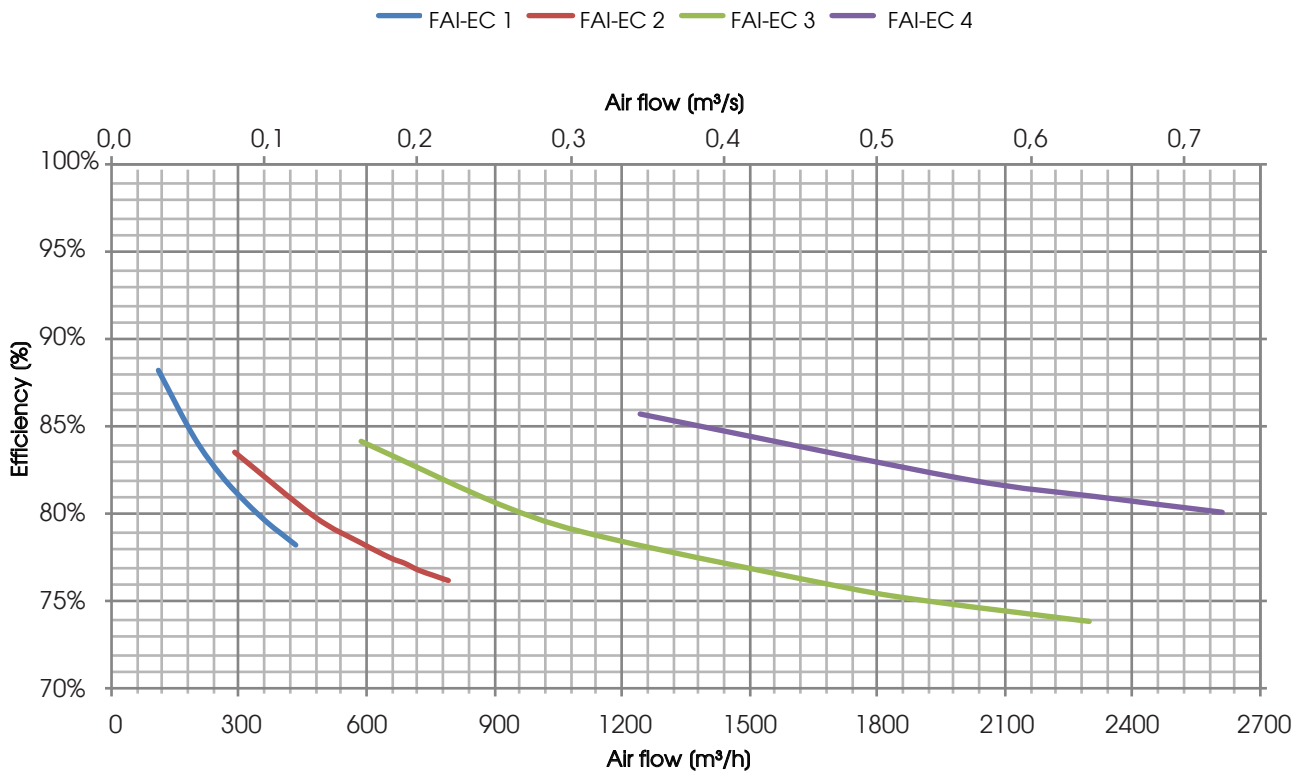

FAI-EC 4

HEAT RECOVERY PERFORMANCE (sensible efficiency)

Values referred to the following conditions (UNI EN 308:1998): T_{bs} external air 5°C; U.R. external 72%; T_{bs} environment 25°C; U.R. environment 38%

INSTALLATION FAI-EC H

FLOOR INSTALLATION

Minimum required space for maintenance (mm)

F= filters, H.E.=heat exchanger, V=ventilators, E.C.= electrical cabinet

MODEL	Dimensions (mm)			
	A	B	C	D
FAI-EC H 1	1420	600	450	900
FAI-EC H 2	1420	600	550	900
FAI-EC H 3	1800	800	840	1100
FAI-EC H 4	2180	800	1050	1340

CEILING INSTALLATION

Minimum required space for maintenance (mm)

F= filters, H.E.=heat exchanger, V=ventilators, E.C.= electrical cabinet

UNIT	Dimensions (mm)			
	A	B	C	D
FAI-EC H 1	1420	600	450	900
FAI-EC H 2	1420	600	550	900

The ceiling installation for 3-4 size of FAI-EC H it is not recommended. The manufacturer is not responsible for injury to persons or damages to things in case of this type of installation. **CAUTION:** The operations of inspection of the heat exchanger for these sizes can not be made manually for the high weight of the same which would result in an unacceptable level of risk.
