| | EVO(D)-PH | A |
| | EVO(D)-PH + probe | A |
| RC-TOP 2 | CTR08-PH | C |
| | EVO(D)-PH | B |
| | EVO(D)-PH + probe | B |

HEAT RECOVERY VENTILATION UNITS for RESIDENTIAL BUILDINGS

RC-TOP

High efficiency heat recovery ventilation unit with double flow for residential buildings. There are 2 sizes.

EQUIPPED

RC-TOP 1 is equipped with a PVC counter-current heat exchanger while, RC-TOP 2 with Eurovent certified aluminum heat exchanger. The unit is equipped with backward blade electronic fans and total by-pass as standard which allows you to take advantage of favorable climatic conditions outside the building for automatic free cooling (or free heating).

STRUCTURE

RC-TOP is realized with a self-supporting casing made by panels, thickness 22 mm, sandwiched on injected polyurethane foam insulation. The casing and the internal parts are realized in zinc magnesium, material with a high resistance to corrosion and an outside attractive appearance. Easy access to the filters, ePM1 55% (ex F7) and ePM10 50% (ex G4), through 2 doors on the front panel. RC-TOP it is designed to be installed on the wall inside buildings with an ambient temperature between 0 ° C and 45 ° C.

CONTROLS

For a quick installation, RC-TOP is supplied complete with control system and connection to the electrical power supply: the version equipped with simplified CTR-S control is available, the version equipped with EVO-PH control and the version equipped with EVOD-PH-IP control designed for complete integration in home automation systems (Modbus protocol with Ethernet connection or, upon request, with the addition of the RS485 connection). The new version of our control systems allows the user to shift from one control system to another very quickly and easily by replacing the remote panel even after the installation.

The CTR-S control allows the user to select three levels of fan speed or the possibility to stop them. It automatically manages the bypass and prevents the heat exchanger freezing by programming the fan speed; The control advises the user if filters needs to be replaced or any other fault. It is available a version without filters pressure switches (dirty control with hour counter, factory setting), filters G4 renewal / G4 recovery and by-pass made by fans unbalance (recommended a ventilation grid)

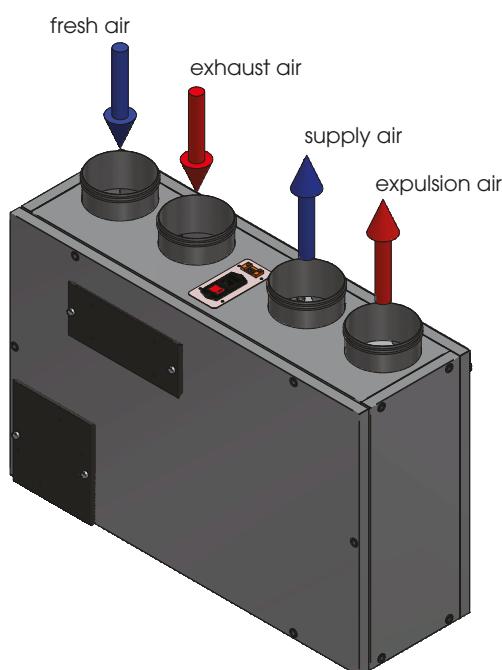

The EVO-PH control has a colorful touch screen interface, it gives an intuitive operating status of the unit and it allows programming the fan speed. This control has a weekly time schedule for automatic fans, it can be controlled by an external switch to activate the booster and it can automatically adjust the air flow when connected to an air quality sensor. It supports post-air treatment accessories (in the duct) and it advises the user if filters needs to be replaced (the filter clogging is monitored with hour counter) or if there is any other fault showing where it comes from. If the unit has included the Kit COP Kit and Kit CAV (installed in the duct outside the unit) you can program the heat recovery ventilator either as constant pressure or as constant flow.

The EVOD-PH-IP control has the same characteristics of the EVO-PH version with the addition of the Modbus communication protocol and it allows full control of the unit by the Home Automation software system. If the unit is in a Home Automation network, the webserver lets the user interact with it throughout a device connected to an Internet browser.

For a more complete view of the characteristics of the control panels, please read the specific manuals

Counterflow heat exchanger made of aluminum manufactured by RECUTECH. RECUTECH participates in the Eurovent Certification Program

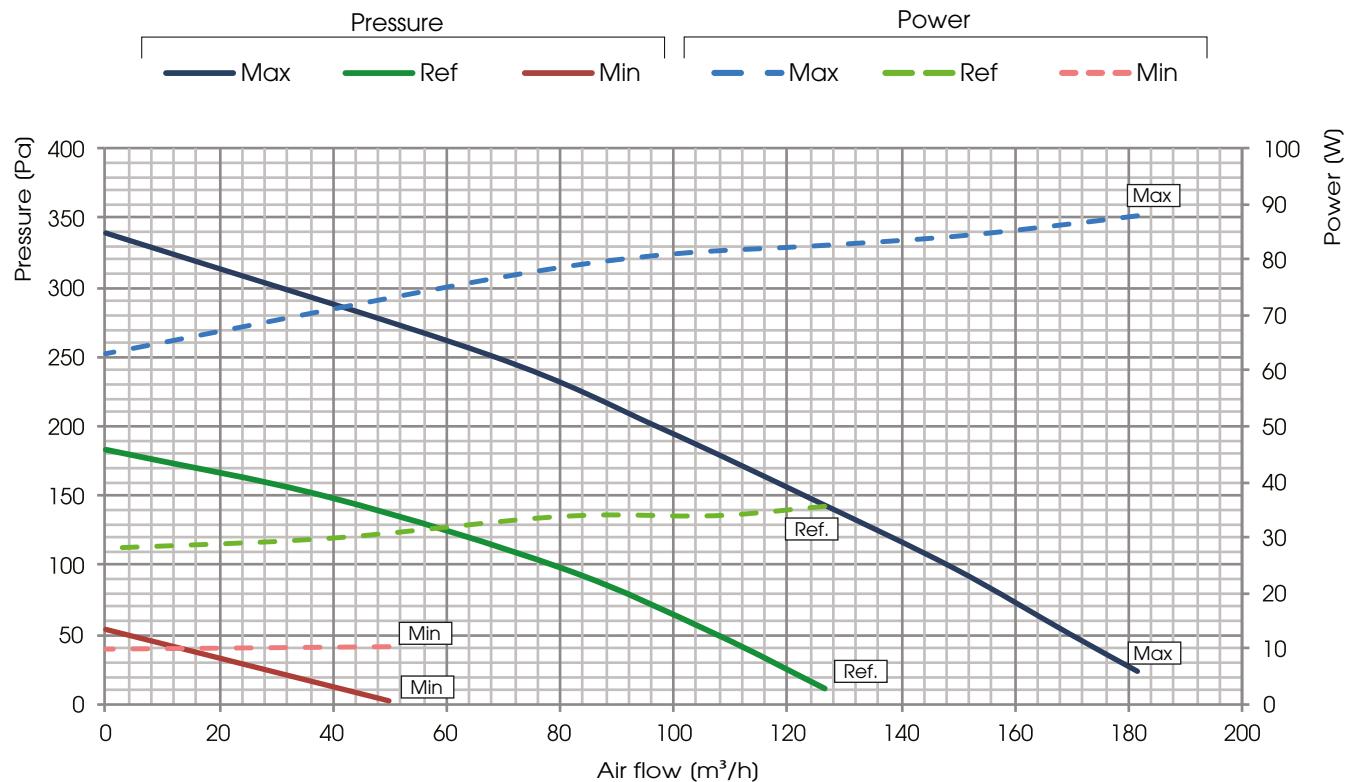

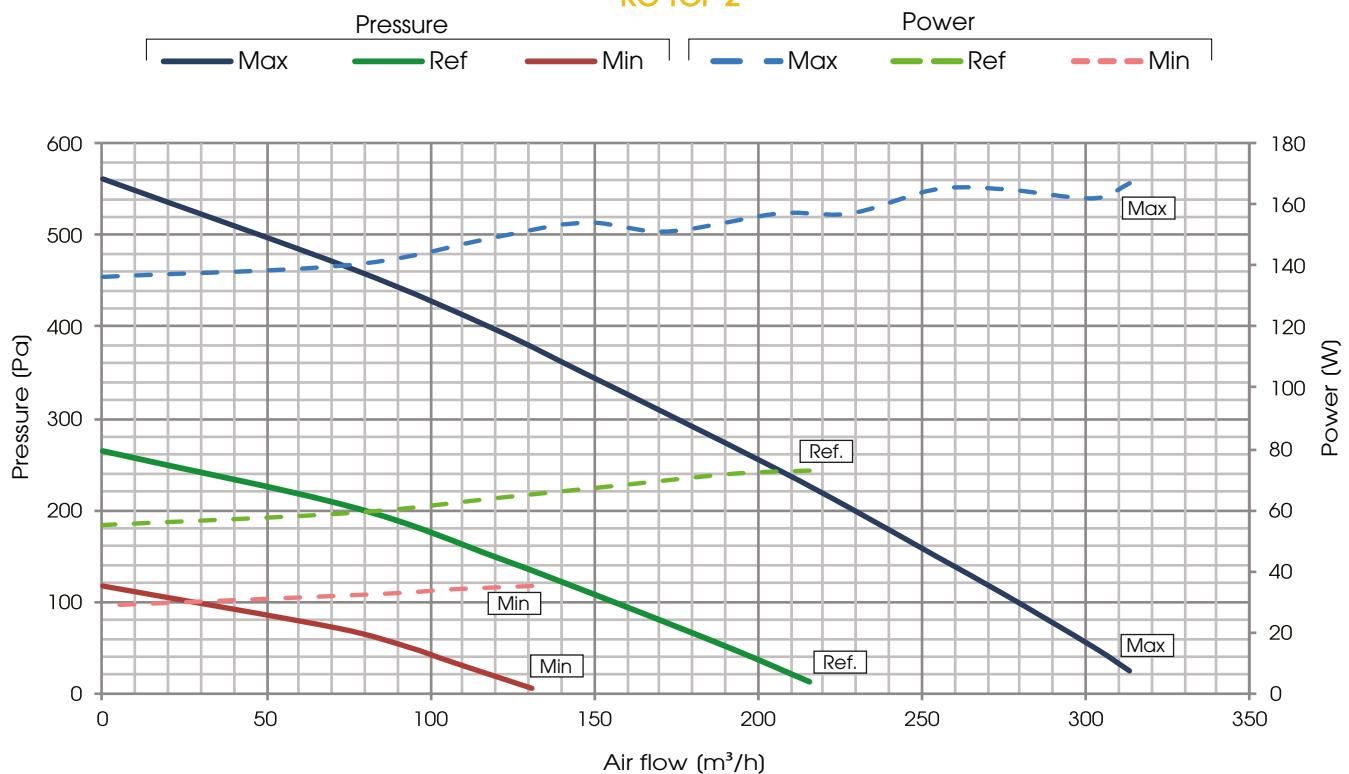

PERFORMANCES (UNI EN 13141-7)

The unit must be ducted properly: UTEK authorizes the use only according to its performance diagram shown into this catalogue
The declared performances are with CLEAN filters, and guaranteed ONLY with the original filters UTEK low pressure drop.

RC-TOP 1

RC-TOP 2

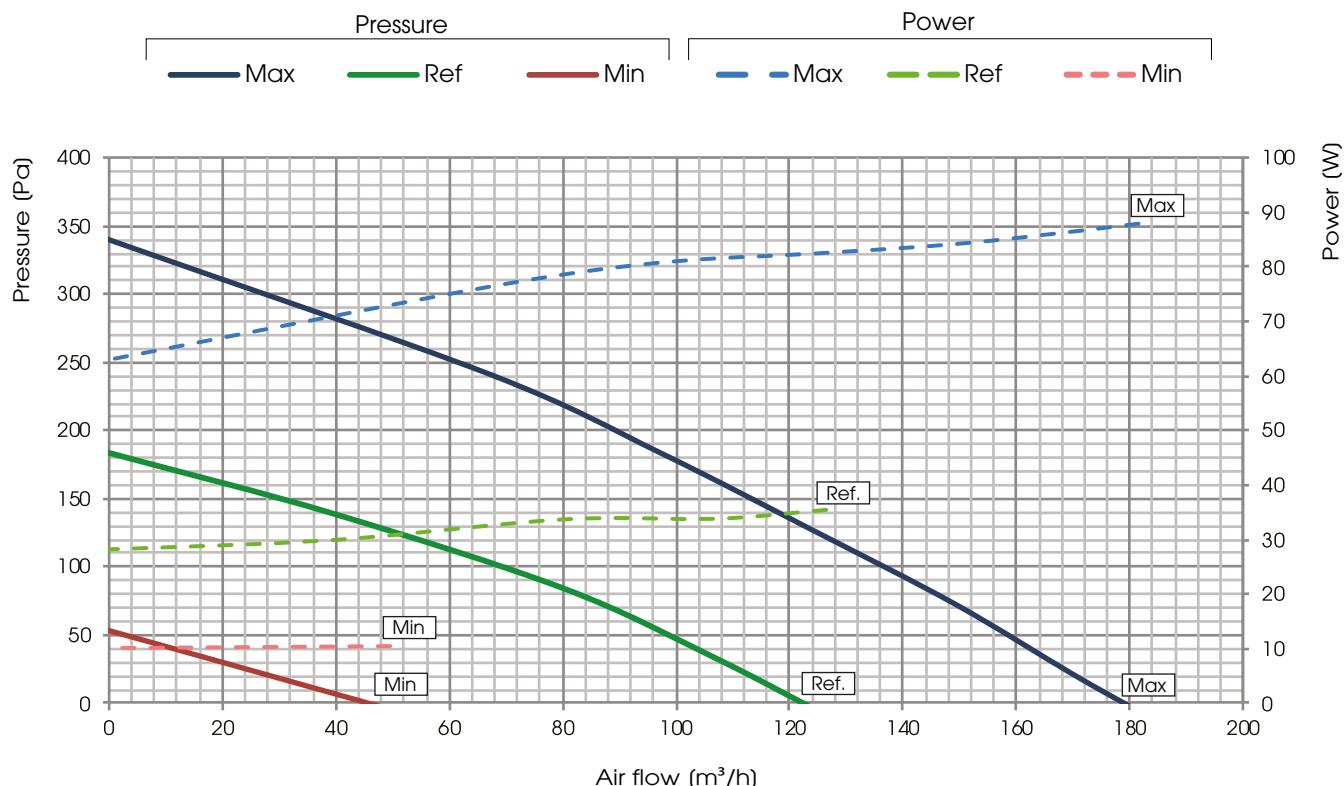

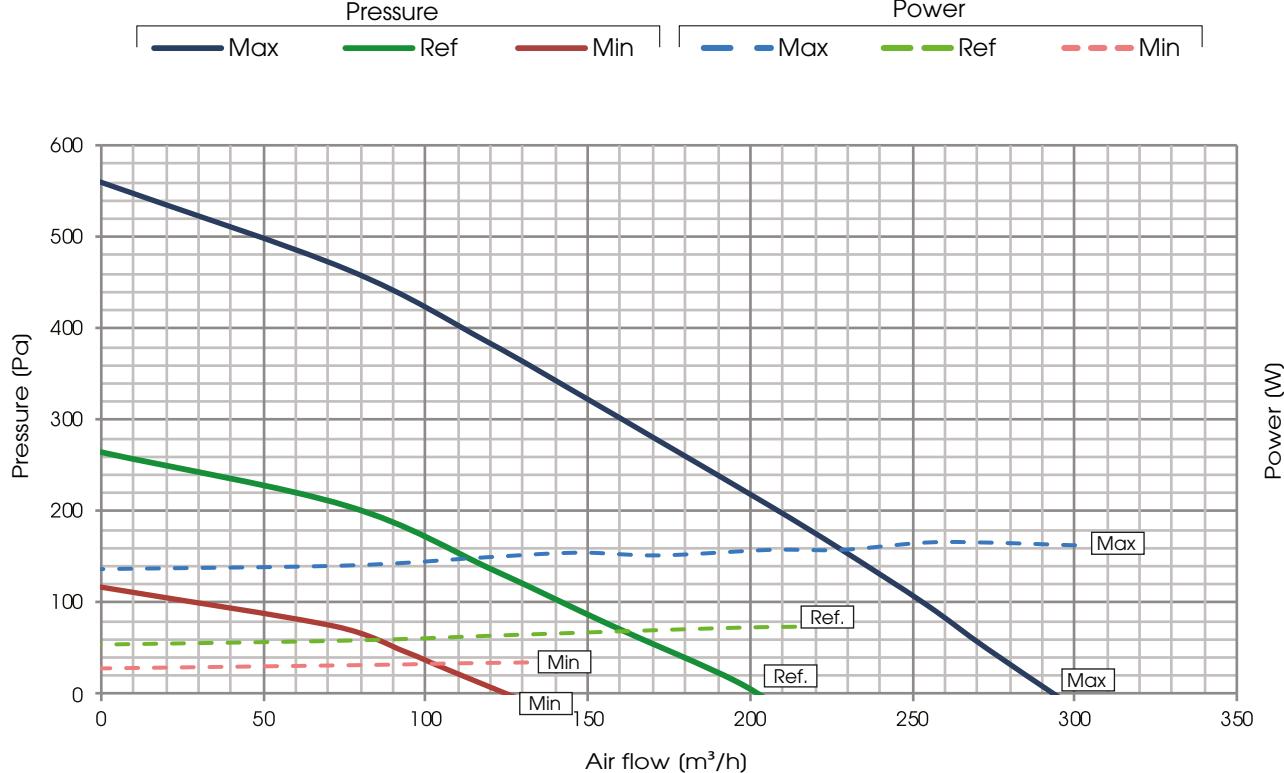

PERFORMANCES (UNI EN 13141-7)
